

18th Feb Meeting MOM:

So, we are shifting our target age group from teen to 18-24 due to legal reasons.

We discussed about what the other team is doing. They are working on tackling overthinking and being overwhelmed by the abundance of information.

Discussion on what use case should we target. First suggestion was a virtual friend to talk with and second suggestion was making class note taking app from the lecture audio. But we rejected the second idea cause audio of a lecture is not enough as a lot of teaching materials are shown on the slides or on a board.

Client advised us to adjust the SRS document accordingly to which Raunak said the document won't change much as the fundamental features are same.

Raunak also brought up the fact that we should add the feature to interact with the bot through text.

Client asked about how much have we progressed on going through the reading materials he provided to which we replied we have to rush a little bit to catch up with other teams.
